(54) Take: NOVEL ANTISENSE OLIGOMERS AND USE THEREOF

(S7) Abstract: The invention relates to the use of a novel type of antisense oligomers for use in the in vitro or in vivo inhibition of gene expression of a target gene. These oligomers, called exon-bridging oligomers are complementary to those parts of a spliced mRNA which are derived from two adjacent exons in the primary RNA transcript, and are called exon-bridging antisense oligomers. These oligomers have no complimentarity to genomic DNA. These oligomers can be used to performs antisense inhibition with less aspecific binding to genomic DNA. The exon-bridging ofigomers are suitable for inhibiting interleaking type I Receptor in, for instance, chondrocytes, and are suitable for the prevention or treatment of osteoarthritis.

INTERNATIONAL SEARCH REPORT

Box II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)
This international Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2. Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful international Search can be carried out, specifically:
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)
This international Searching Authority found multiple inventions in this international application, as follows:
see additional sheet
As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. X No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-19, 36, 37
Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-19, 36,37

In vitro method for increasing the synthesisof extracellular matrix compounds in a cell population by inhibiting the expression if IL-1R1 characterised in that it comprises the step of contacting the cells with an IL-1R1 exon-bridging antisense oligomer; antisense oligomers for this purpose; their use in the preparation of medicaments.

2. claims; 20-35

Methods for the in vitro modulation of the expression of a target gene in a cell population with an antisense oligomer characterised in that mature mRNA function is inhibited by contacting the cells with an exon-bridging antisense oligomer directed against said mature mRNA; method of producing an exon-bridging antisense oligomer for the inhibition of expression of a target gene.
